\_\_\_\_\_  
\_\_\_\_\_

GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA  
There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, water previously stored by others, return flows from use of groundwater, or other "foreign" water to the natural stream system.

An appropriative right is required for use of water on non-riparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. After the formation of the California Water Commission back on December 19, 1914, new appropriators have been required to obtain a permit and license from the State. Appropriative rights can be granted to waters "foreign" to the natural stream system.

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users as set forth in Water Code section 5100 with specific exceptions. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversions, and (3) assists the State to determine if additional water is available for future appropriators.

The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include: (1) Statements of Water Diversion and Use, (2) Information Pertaining to Water Rights in California, and (3) Appropriation of Water in California.

See back of page for General Information. If there is insufficient space for your answers, please number them in the space provided on the back of this form.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to understand the target audience's preferences and pain points. Once a need is identified, the next step is to develop a concept that addresses this need. This stage often involves brainstorming and sketching initial ideas. The third step is to create a prototype, which allows the team to test the concept and gather feedback. Following this, the product is refined based on the feedback received. The final step is to launch the product into the market, which involves marketing and distribution efforts to reach the target audience.

2. The second step in the process is to develop a concept that addresses the identified market need. This stage often involves brainstorming and sketching initial ideas. The third step is to create a prototype, which allows the team to test the concept and gather feedback. Following this, the product is refined based on the feedback received. The final step is to launch the product into the market, which involves marketing and distribution efforts to reach the target audience.

3. The third step in the process is to create a prototype, which allows the team to test the concept and gather feedback. Following this, the product is refined based on the feedback received. The final step is to launch the product into the market, which involves marketing and distribution efforts to reach the target audience.

4. The fourth step in the process is to refine the product based on the feedback received. This stage involves making adjustments to the design and functionality to better meet the market need. The final step is to launch the product into the market, which involves marketing and distribution efforts to reach the target audience.

5. The fifth step in the process is to launch the product into the market, which involves marketing and distribution efforts to reach the target audience. This stage is crucial for the success of the product, as it determines whether the product can reach its intended market and generate revenue.

6. The sixth step in the process is to monitor the product's performance in the market. This involves tracking sales, customer feedback, and market trends to ensure the product remains competitive and meets the needs of the target audience. If necessary, adjustments can be made to the product or marketing strategy.

7. The seventh step in the process is to evaluate the overall success of the product. This involves comparing the product's performance against the initial goals and objectives. If the product is successful, the team can consider scaling the production and distribution. If not, the team can learn from the experience and apply the lessons learned to future product development efforts.

8. The eighth step in the process is to document the product development process. This involves creating a detailed record of the steps taken, the challenges faced, and the solutions found. This documentation is valuable for future reference and can help the team improve their product development process.

9. The ninth step in the process is to share the product with the target audience. This involves using various marketing channels to promote the product and generate interest. The goal is to create a strong brand identity and build a loyal customer base.

10. The tenth step in the process is to provide ongoing support and maintenance for the product. This involves addressing customer inquiries, providing technical assistance, and ensuring the product remains functional and up-to-date. This step is essential for maintaining customer satisfaction and loyalty.

# GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California, riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on their riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, or return flows from use of groundwater.

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914 new appropriators have been required to obtain a permit and license from the State.

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversion, and (3) assists the State to determine if additional water is available for future appropriators.

- A. Water is used under: Riparian claim ☒; Pre-1914 right ☒; Other (explain) \_\_\_\_\_
- B. Year of first use (Please provide if missing above) \_\_\_\_\_
- C. Amount of Use - Enter the amount of water used each month. If monthly and annual use are not known, check the months in which water was used.

Amounts below are: ☐ Gallons ☒ Acre-feet ☐ (other) \_\_\_\_\_

	JAN.	FEB.	MAR.	APR.	MAY	JUNE	JULY	AUG.	SEPT.	OCT.	NOV.	DEC.	TOTAL ANNUAL
1992					30	30	30	30	30				150
1993					30	30	30	30	30				150
1994					30	30	30	30	30				150

- D. Purpose of Use - Specify number of acres irrigated, stock watered, persons served, etc.
- Irrigation \_\_\_\_\_ acres; Stockwatering 150 hd cattle; Domestic \_\_\_\_\_
- Other (specify) May & Pasture

\*\*\* CONTINUE ON BACK PAGE \*\*\*

\*\*\*PLEASE COMPLETE, SUBMIT THE ORIGINAL AND MAKE A COPY FOR YOUR RECORDS\*\*\*

- E. Changes in Method of Diversion - Describe any changes in your project since your previous statement was filed. (New pump, enlarged diversion dam, location of diversion, etc.)

*none*

- F. If part of the water listed in Part C consists of reclaimed or polluted water, please indicate the annual amounts of reclaimed or polluted water in the space below.

*none*

I declare under penalty of perjury that the information in this report is true to the best of my knowledge and belief.

(FIRST NAME) (M. NAME) (LAST NAME)

COMPANY NAME: Bresciani Ranch

#### GENERAL INFORMATION PERTAINING TO WATER RIGHTS IN CALIFORNIA

There are two principal types of surface water rights in California. They are riparian and appropriative rights.

A riparian right enables an owner of land bordering a natural lake or stream to take and use water on his riparian land. Riparian land must be in the same watershed as the water source and must never have been severed from the sources of supply by an intervening parcel without reservation of the riparian right to the severed parcel. Generally, a riparian water user must share the water supply with other riparian users. Riparian rights may be used to divert the natural flow of a stream but may not be used to store water for later use or to divert water which originates in a different watershed, or return flows from use of groundwater.

An appropriative right is required for use of water on nonriparian land and for storage of water. Generally, appropriative rights may be exercised only when there is a surplus not needed by riparian water users. Since 1914 new appropriators have been required to obtain a permit and license from the State.

Statements of Water Diversion and Use must be filed by riparian and pre-1914 appropriative water users. The filing of a statement (1) provides a record of water use, (2) enables the State to notify such users if someone proposes a new appropriation upstream from their diversion, and (3) assists the State to determine if additional water is available for future appropriators.

The above discussion is provided for general information. For more specific information concerning water rights, please contact an attorney or write to this office. We have several pamphlets available. They include:

- "Statements of Water Diversion and Use"
- "Information Pertaining to Water Rights in California"
- "Water Rights for Stockponds Constructed Prior to 1969"
- "Appropriation of Water in California"
